The “Reading Choice” Model:  
Student Voice, Jigsaw  
Activities, and Course Content

# Problem!

- Course has 2 fewer sessions than normal
  - How do I cover the same amount of content? How do I get students to read more?
- 

What if we cover the same  
material **collectively**, but  
build-in student choice,  
**individually**?

# The Reading Choice Model

## Survey

Select readings of interest, assign the rest

## Classroom Jigsaw

First in 'expert' groups, then interteaching

## Debrief/Plenary Qs

Connect to themes, compare, etc.

# My Takeaways

- Structured discussions worked
- Especially effective when readings disagreed
- Better depth of conversation and more connections

Who preferred  
RC versus full  
reading?

● ● ●  
Confidence in  
Knowledge

---

“I feel that when I wasn’t quiet understanding a given reading, reflecting on it with my classmates deepened my understanding and helped me see what wasn’t originally clicking.”

We take 5 courses, some of us work,  
and we're expected to have a social  
life. **It's hard to do everything**, so  
choice and a bit less makes it easier  
to learn and engage.

“Class was most engaging  
when doing these structured  
conversations. It alleviated  
some of the weekly pressure.”
