Balance loads occur by design (based on f²) and teaming is critical to ensure proper load capacity

Waste and Recycling

Please refer to the Waste and Recycling section of the contract

Site clean up and disposal

- please refer to

Waste and Recycling section

at the end of the contract

Waste disposal areas or areas that are used

5 weeks

Waste and Recycling Tips:

- Balance loads at all times. Uneven loads can lead to equipment failure and safety hazards.
- Check for balance and stability before moving or lifting heavy loads.
- Use proper tie-down techniques to secure loads. Use the correct number and placement of tie-downs.
- Cardboard boxes are recycled. Please flatten boxes to ease disposal.
- Please pack up and be bagged properly in clear plastic bags. Bags may be tied together.

For more information, please contact the Safety Department at safety@esa
