

To ensure compliance with the Laboratory Biosafety Guidelines (Public Health Agency of Canada), and/or the Containment Standards for Veterinary Facilities (Canadian Food Inspection Agency), and/or the Tri-Council Policy Statement and/or the conditions of the University Biohazard Permit is required for all research and teaching activities which involve the use, manipulation and storage of biohazardous material (including, but not limited to, viruses, bacteria, fungi, parasites, recombinant DNA, biological toxins, prions and other micro-organisms/genetic

generally be sufficient to summarize the required risk assessment. **The following guidance is provided:**

Indicate the Risk Group to which you think the biological agent/material should be assigned. If available, you can support this classification by providing an accepted Risk Group classification and documentation such as a relevant MSDS, and/or product information from a commercial source (ATCC/Company of Origin) for each biohazardous agent listed in the application.

If

Suspension and/or Revocation of Biohazard Permits:

The Department of Environmental Health & Safety and the Biohazard Committee reserve the right to suspend and/or revoke Biohazard Permits should the Principal Investigator be found engaging in activities not specified in or contrary to the approved protocol. All such activities relating to the research will be suspended as will access to research funds until such time the Biohazard Permit is reinstated or reissued.
