```

- Level playing field and distortions to competition (beggar-thy-neighbour)
- Encourages investment in capacity that not otherwise built, or keeps uneconomic capacity alive (with effects on prices, jobs)
- Impacts on important social and economic goals (governance, environment)
- Undermines faith in global markets and a fair global economy
- Support is a growth industry.....and is hard to reform

Lots of reasons for a bigger role for the state

- (i) Significant essential -- support in COVID-19.
 - Design matters how you go in affects how/if you come out
 - How you go out also matters loan guarantees, tradable sectors

(ii) Resilient supply chains

Work to date

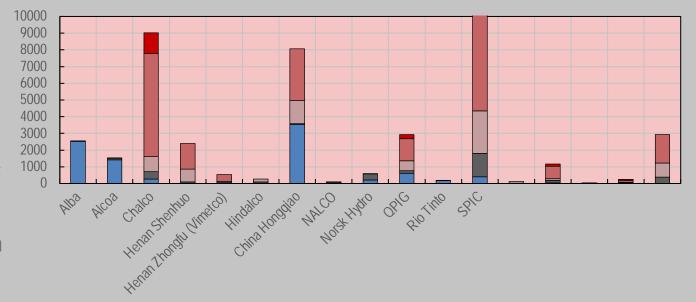

- ! Commodity (aluminium)
- ! High-tech sector (semiconductors)
- ! Below market finance (horizontal)
- ! Ongoing work on rolling stock, energy inputs, SOEs

- To assess government support in industrial sectors, we looked at
 - ! Necessary given lack of policy transparency
 - ! Enables greater granularity (e.g., of subnational measures)
 - ! Enables identification of support beyond traditional forms (e.g., below market finance)

- : Support upstream can have sizable effects downstream.
 - Need to take a value chain approach
- : Support mostly takes the form of energy subsidies and below-market financing.
 - ! Below-market financing is hard to measure but even conservative estimates suggest it is significant. (USD 7-56 billion)
 - ! Aluminium multinationals obtain support in the different countries in which they operate, but large SOEs get most support from their home countries.
- : There is strong involvement of the state in the aluminium value chain, and SOEs are both recipients and providers of support:
 - ! SOEs account for almost half of all smelting capacity
 - ! Cheap finance (debt) is often delivered through stateowned financial institutions
 - ! Issues for transparency

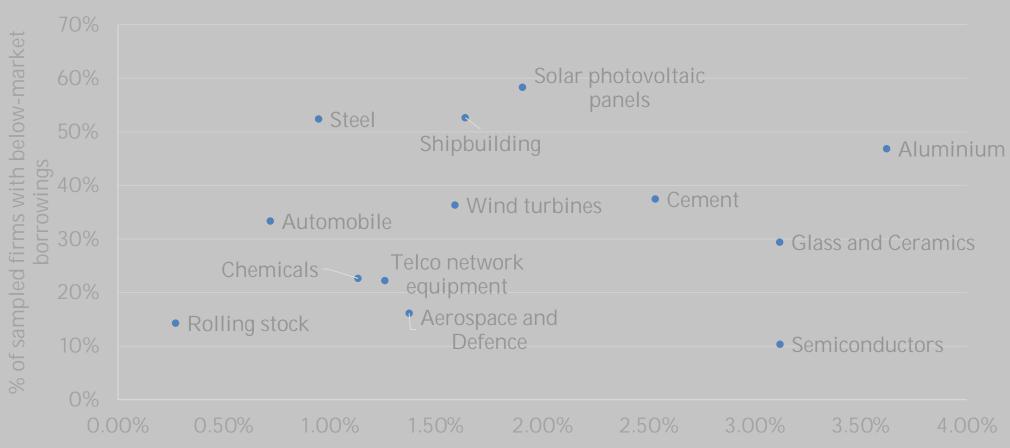

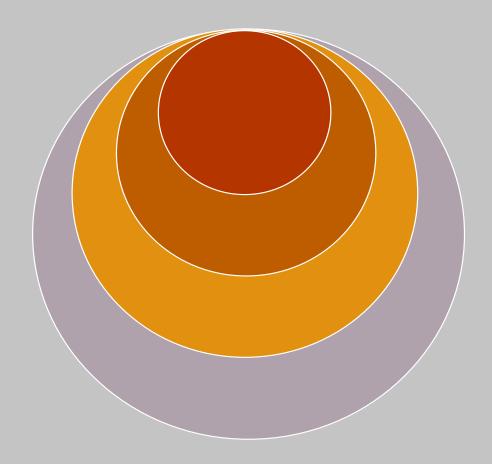

Support estimates differ in precision and complexity

Transparency

oversight

good governance practices

-

State support is different from public service obligations

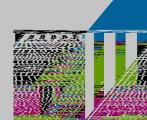

- Often 50% or majority ownership, but also other factors

11

• We use the concept of "state enterprise"

- Lack of transparency masks government support by giving appearance of regular commercial transactions
- State investment is the plumbing through which a range of support can flow Grants, loans, equity
 But also less direct benefits (information, competitors self-censor)
- Other reasons, e.g.,
 - ! National security FDI screening, M&A
 - ! Market distortions (e.g., under-pricing in internationally competitive tenders, M&A bids)
 - ! Economic coercion (unwritten instructions)
 - ! Forced tech transfer

- Reform of government support requires 4 interconnected things
 - -Transparency (what's going on)
 - Predictability (lock in, baseline)
 - Reduction (starting with the most egregious)
 - Prevention (tomorrow's subsidisers in tomorrow's

- ! International competition
- ! Subnational competition
- ! Impacts on productivity
 - Negative correlation to cheap loans

! Who pays, who benefits?

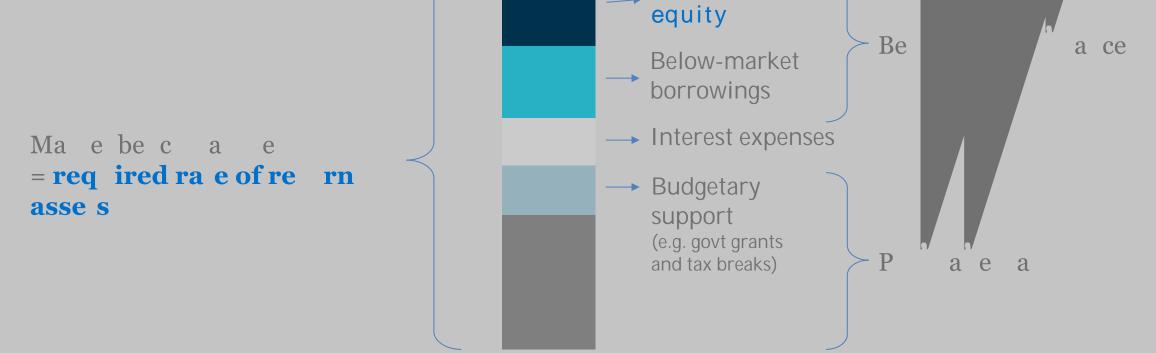

Investments in the public interest (education, infrastructure – including digitals health systems)

Below-market
